Archimedes

PC EMULATOR

PC EMULATOR

PC EMULATOR

The PC Emulator enables you to turn your 1 Mbyte (or greater) Archimedes computer into a system similar to an IBM PC or clone. To use the emulator, you require a minimum of 1 Mbyte of memory, which gives you sufficient RAM for MS-DOS (version 3), applications and data. On a larger system the memory available increases to a maximum of 640K.

If your Archimedes has a hard disk you can use this with the PC Emulator by creating a partition for exclusive use of MS-DOS files.

Some of the more commonly used MS-DOS commands are included in the enclosed leaflet. It is not intended to be a complete MS-DOS user guide.

SUITABLE FOR USE WITH:

Archimedes
